### Introducing Brighton's Rolled Plate Solution

To provide maximum service to customers requiring formed tank components, Brighton, widely known as the leader in cold formed tank heads can provide rolled cylinders as well. Brighton can supply cylinders as small as 12" OD and diameters in excess of 30'. Shells can be rolled and tacked, rolled and strapped, lapped, or completely welded. Brighton also stocks a variety of carbon steel, stainless steel, and nickel alloys.

Our ASME code shop has the ability to provide a single shell or welded columns whose lengths are limited only by shipping availability. In house seam welding allows a variety of options to help our customers control costs. Brighton's ability to match their heads with the shells allows for quick fit up at our customer's shop or jobsite. On site shot blasting, real time X-ray, and pickling help Brighton maintain a competitive cost structure to benefit our customers.
