

BRIGHTON  
TRU-EDGE HEADS

## CYLINDERS

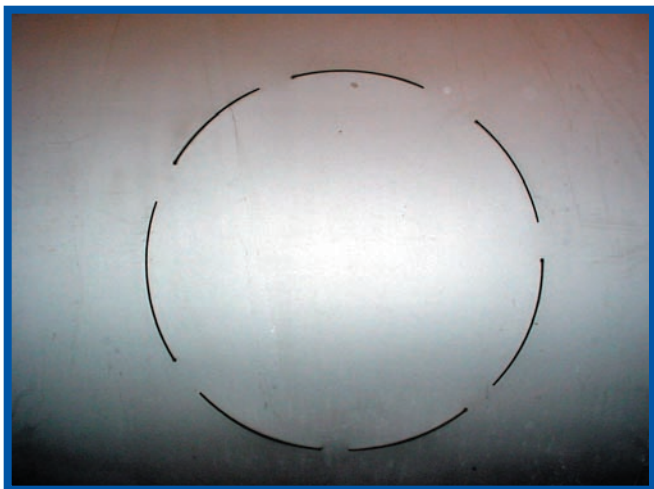

To provide the maximum service to customers requiring formed tank components, Brighton Tru-Edge Heads has further extended its operations to provide rolling of tank cylinders.

By purchasing both heads and cylinders from Brighton, the customer receives a number of benefits. Brighton will provide these units with a match between the rolled cylinder and the Tru-Edge tank head saving fit-up costs. By shipping the heads and cylinders together, the customer saves on transportation cost. Better control of scheduling is maintained when both the heads and cylinders arrive at the job together.

Cylinders can be fabricated from stainless steel, carbon steel, nickel alloys, clad, aluminum, copper, and other exotic materials. Brighton has the capacity to roll plates up to 16' wide in thicknesses of 1/4" thick mild steel, or 1" thick stainless steel. Cylinders can be provided rolled and tack or fully welded. X-ray, dye check, and code paperwork can also be provided.

Other options for shells include beveling, polishing, bracing, or applying jacket material such as half pipe or dimple jacket. Nozzle openings can also either be burned or stitch cut.

Parameters are given as reference only, please call your salesman for specific inquiries.  
Ask us about polishing, burning nozzle openings, or applying jacketing to your ASME Flanged and Dished Heads.
